PROFILE

With hands-on experience in freelancing and multiple projects development, I specialize in delivering full-stack solutions that consistently surpass client expectations. My competitive drive, coupled with strong social skills, has propelled me to victory in numerous inter-university coding competitions.

Beyond development, I've honed my abilities in team management and requirement analysis. With these multifaceted skills, I am confident in my ability to contribute significantly to any company aligned with the principles of growth and innovation."

EDUCATION

Bachelor's Of Science In Software Engineering

Air University Islamabad

Semester: 6th

CGPA: 3.54 / 4

ACHIEVEMENTS

Winner of Webathon (AirTech '24)

Organized by Air university

Winner of WebAir (2024)

Organized by Microsoft Learn Students Ambassador

Winner of CodeAir 2.0 (2023)

Organized by Microsoft Learn Students Ambassador

WORK EXPERIENCE

MERN Developer

TapitCard , NSTP Islamabad

2023 June - 2023 Oct

- Understood the business process and identified the requirements for the comprehensive redesign and redevelopment of the entire front-end, back-end, and database using the MERN stack.
- Communication with stakeholders regarding requirements analysis, processes, configurations, strategies and planning.
- Collaborated with developers using Github and Jira
- Developed prototypes for the UI

MERN Intern

TapitCard , AUBIC

2023 Feb - 2023 June

- Elicited and analyzed user requirements for developing a MERN application to automate the business's process
- Developed RESTFUL API's and implemented robust authentication and authorization
- Developed user-friendly user interface using React with Material UI

PROJECTS

Truckers: Real-time Delivery system

(MERN)

- Delivery system for courier services with real-time updates on order completion or cancellation using socket.io
- Developed admin dashboard for creating vehicles, shipments and tracking each vehicle
- Created driver dashboard for CRUD operations on shipments assigned to them.
- Utilized the Google Maps API to enhance route optimization for vehicles

Transformatics

(React)

- Redesigned and developed Transformatic's website with a more modern and user-friendly UI
- Worked extensively with stakeholders to elicit and analyze requirements
- Optimized Google PageSpeed insight score to 90+ for all metrics
- Implemented on-page SEO optimization techniques
- Integrated JazzCash payment API

KFC Clone

(MERN)

- Developed a fully functional clone of KFC that enables users to login/signup , place and track their orders
- Created an admin dashboard for performing CRUD operations on menu items and orders
- Integrated cloudinary API for uploading and hosting menu item images
